Rupert, ID 83350

PLEASE BE AWARE:

**These are bare-root
seedling trees/shrubs.**

We reserve the right to substitute
one size either up or down
depending upon what our
supplier sends us.

For Questions call: **208-572-3375** or **208-436-4202.**

Please LEAVE A MESSAGE. We will return your call promptly.

***PAYMENT IN FULL**

must be included with your Order.

ORDERS WILL ARRIVE MID-TO-LATE APRIL.

You will be contacted for pickup.

2027 SEEDLING TREE SALE

LOMBARDY POPLAR (*Populus nigra* 'Thevestina') 40 to 50', Zone 2. A perfect choice for a fast-growing privacy screen or wind break. Wonderful columnar habit with grayish-green foliage that provides a gorgeous backdrop for smaller trees and shrubs. Branches start close to the ground and grow upward, parallel to the trunk. Plant in rows about 6-8 ft. apart for screening. Works well in a multi-row windbreak. Hardy to -40°F.

NORWAY POPLAR (Cottonwood Siouxland) (*Populus deltoides*) 40 to 60', Zone 3-9. This hybrid poplar is a fast-growing tree used for windbreaks and riparian plantings. Grows up to 6 feet per year with regular irrigation and protection from wildlife and animals. Can be used down a property line, along a roadway, or in windbreaks. Requires moist soil but can tolerate dry soil. 20-35' spread. Plant seedling trees 8-12 feet apart for single row, 10-12 feet apart for multiple row windbreak.

MAPLE RUBRUM (*Acer rubrum*) 40-60', Zones 3-9. A fast growing, medium-to-large deciduous shade tree native to eastern North America. Known for its brilliant red and yellow autumn leaves, red twigs, and early spring red flowers. Plant in full sun to part shade (more sun yields brighter fall color). Maple Rubrum is highly adaptable; it tolerates clay, compacted soil, and wet sites, though it prefers moist, slightly acidic soils. Maple Rubrum has a low flammability rating. It makes an excellent lawn, park or street tree, but it makes a dense mat of surface roots that outcompete other plants growing in its shade. It fits almost any garden theme.

AMERICAN ARBORVITAE (*Thuja Occidentalis*) 20'to 40' Zones 3-8. American arborvitae is a low-maintenance plant that tolerates clay soil, wet sites, and air pollution. It grows best in moist, neutral to alkaline, well-drained loam. It does not tolerate dry or exposed, windy sites. It grows well in full sun or partial shade. It is globular, pyramidal, or columnar to conical in growth form. Its density crown provides nesting sites for songbirds. A distinctive feature of this tree is its dominant trunk. The bark is grayish-brown to reddish-brown with shallow furrows. Small oblong cones appear in the spring, mature to a brown color in the summer, and may persist. Planted in groups or rows, it performs well as a hedge, privacy screen, or windbreak.

COLORADO SPRUCE (*Picea Pungens*) 30 to 50', Zones 3-8. Gorgeous, brilliant, stately. The Colorado Blue Spruce is a slow growing pyramidal shaped evergreen with steel blue foliage. It prefers heavier soils, full sun, and clean cultivation. Will reach a height of six feet in eight years on a good site. Probably the most drought tolerant of all spruce. It is widely used in windbreaks or as an ornamental yard tree or Christmas Tree.

ROCKY MOUNTAIN JUNIPER (*Juniperus scopulorum*) 30 to 40', Zones 3-8. Rugged, pyramidal tree with silvery-blue green foliage. It is slow growing with dense foliage and pleasantly aromatic. The fruits are fleshy berrylike spherical cones – they are bright blue with a whitish bloom and sweet tasting, with thin skins (good source of food for wildlife). Survives well in hot dry summers of the western U.S.

CHOKECHERRY, Common (*Prunus virginiana*) is a large deciduous shrub or small understory tree that typically grows 20 to 30 feet tall. It has dark green elliptical leaves which turn golden yellow to orange in the fall. Small white blossoms form in the spring in drooping cylindrical clusters. Pea-sized fruit ripens from red to dark purple or black in the late summer. Vital food and cover sources for birds, deer, elk, & pollinators. Chokecherry bushes are often used in windbreaks, shelterbelts, and riparian stabilization projects to help with erosion control. Berries are heavily astringent (giving the plant its name), and can be used in jams, jellies, and syrups.

LILAC, Common Purple (*Syringa Vulgaris*) Height 12-15', Zones 2-8. Lovely clusters of lavender flowers grow from the branch tips in mid-spring. They make a wonderful contrast to the dark green leaves. Abundant clusters of sweetly fragrant, purple flowers in mid-spring on a vigorous, upright, multi-stemmed shrub with heart-shaped, green foliage. Ideal as a flowering hedge or screen. Plant near a window or pathway where the fragrant blooms can be enjoyed. Deciduous. Prune in summer after blossoms are gone.

PRIVET (*Ligustrum*) Height: 6'-15', **Zones 4**. A fast-growing deciduous shrub widely used for privacy hedges as it can be neatly clipped or trimmed. It can be maintained at any height, making a thick dense hedge right to the ground. The more it's trimmed, the thicker this hedge gets. The lustrous green leaves stay on until late fall. It has clusters of small, fragrant, creamy-white flowers that bloom in spring or early summer which produce small dark blue, black or purplish berries consumed by birds. Use the Privet as a hedge, a border, or privacy screen. Prune regularly in spring or summer to maintain shape and density. It is highly adaptable to a variety of soils. Water deeply when newly planted; established plants are quite drought-tolerant.
